

## Details about Graduate Engineer Trainee (GET Program):

### Job Description: (Agentic AI Platform)

#### Role Overview

The Graduate AEX Developer will be responsible for assisting in the design, development, and deployment of intelligent agents and automation workflows on the **Agentic Experience (AEX) platform**. This entry-level role is ideal for recent engineering graduates joining through campus placement, providing opportunities to work on scalable AI-driven solutions that support enterprise IT operations, service management, and zero-touch governance initiatives. Under guidance from senior team members, the graduate developer will gain hands-on experience with AI agent development, automation, and integration with enterprise tools. Strong problem-solving ability, eagerness to learn, and a foundational understanding of programming and software concepts are essential for success in this role.

---

#### Key Responsibilities

##### 1. Agent Development & Automation

- Design and develop **AI agents, workflows, and playbooks** on the AEX platform
- Build **zero-touch automation use cases** (ITSM, SAM, compliance, service desk)
- Integrate AI agents with enterprise tools (ServiceNow, AD, SCCM, APIs)

##### 2. Platform Integration

- Develop **REST API-based integrations** with internal/external systems
- Enable data exchange between AEX and tools like:
  - ServiceNow
  - CMDB / Asset Management systems
- Work on **event-driven architectures** and webhook-based triggers

##### 3. AI/ML & Logic Implementation

- Configure **rule-based and AI-driven decision engines**
- Develop **intent-based workflows and conversational logic**
- Leverage NLP models for chatbot/virtual assistant automation

##### 4. Use Case Implementation

- Automate enterprise scenarios like:
  - Password reset / access provisioning
  - Incident auto-resolution
  - Compliance checks and remediation
  - Software license validation (SAM)
- Build reusable **agent templates and libraries**

##### 5. Testing & Deployment

- Perform **unit testing, UAT support, and production deployment**
- Ensure performance optimization and scalability of agents
- Monitor agent performance using logging and analytics tools

##### 6. Governance & Compliance

- Align development with **IT governance, audit, and security policies**
- Maintain documentation for audit and knowledge management

#### Technical Skills

- **Python / JavaScript / Node.js**
- API development & integration (REST, JSON)
- **AI/ML concepts, NLP basics**
- Workflow automation tools / RPA / Agentic platforms

#### Soft Skills

- Strong analytical and problem-solving skills
- Ability to design **scalable, reusable solutions**
- Effective stakeholder communication (IT, business, governance teams)
- Documentation and presentation skills (for leadership reviews)

#### Key Deliverables

- AI agents and automation workflows deployed in production
- Integration modules with enterprise systems
- Use case documentation and reusable templates
- Compliance-aligned automation solutions

#### Success Metrics (KPIs)

- % reduction in manual IT operations
- Agent success rate / auto-resolution rate
- SLA improvement in service requests
- Compliance adherence and audit readiness
